Nos 6 and 8

Including nos. 32-38 Rivington Street. Shoreditch electricity generating sub-station. Built 1905-7 by LCC architects (probably Vincent Harris) to serve LCC tramway system. Brown stock brick with stone cornices and parapet copings, Mannerist classical style. One storey with attics; long frontage of 7 sections has plain walls with rusticated brick quoining. Stone impost band connects 3 large round-arched windows to central section, flanked by taller slightly projecting bays with tall round entrance arches and segmental concave parapets. Beyond these are lower sections with 5-light attic stories above double entry to right and 3-window range to left; rusticated end bays with 12-pane sashes complete the composition. That on left returns into Rivington Street; its facade has blank outer bays with parapet continued as impost band to tall round-arched entrance set in rusticated, projecting centrepiece with ramped parapets.
